RT "Nucleotide sequence of a collagen cDNA-fragment coding for the

RT carboxyl end of pro alpha 1(I)-chains.";

RL FEBS Lett. 111:61-65(1980).

CC -!- FUNCTION: Type I collagen is a member of group I collagen

CC -!- FUNCTION: Type I collagen is a member of group I collagen

CC -!- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.

CC -!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium hydroxyapatite.

CC chains pro-1153 is the only 3-hydroxypro and the only

CC chains. Pro-1153 is the only 3-hydroxypro and the only

CC chains. Pro-1153 is the only 3-hydroxypro and the only

CC chillarity: Belongs to the fibrillar collagen family.

CC -!- SIMILARITY: Contains 1 VWFC domain.
                                                                                                                                                                                                                              Signal;

                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel human GENSET coding sequences (ACC51060-ACC51115) and proteins (ARR4853-ARR48508). The GENSET sequences are useful for preparing a composition for treating GENSET-related disorders. They can also be used as markers for tissues in whithe corresponding protein is preferentially expressed, as molecular weight markers on Southern gels, as chromosome markers or tags to identify chromosomes, and as reagents in assays to quantitatively determined levels of GENSET expression in biological samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New GENSET polynucleotides and polypeptides, useful for preparing composition for treating GENSET-related disorders and as reagents i assays to quantitatively determined levels of GENSET expression in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25-MAY-2001; 2001US-0293574P.

OM protein - protein search, using sw model

Run on: December 1, 2005, 08:38:06; Search time 37 Seconds (without alignments) 423.874 Million cell updates/sec

Title: Perfect score:

Scoring table: OLIGO Gapop 60.0 , Gapext 60.0

US-09-924-340-58 163 1 MGPPGFKGKTGHPGLPGPKG.....GAMPMEQQYPPMKTMKGPFG 163

Searched: 283416 seqs, 96216763 residues

Total number of hits satisfying chosen parameters: Word size : 100 0

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Listing first 100 summaries
